

DWA_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

1. What parts of encapsulating your logic were easy?

Considering that factory functions are functions that return a object, it was easy to return element as a object of a my function.

2. What parts of encapsulating your logic were hard?

Trying to see how i could incorporate getter and setter methods into the factory function was something i wasnt sure needed to be added.

3. Is abstracting the book preview a good or bad idea? Why?

It is a good idea, as abstractions make code more maintainable and easier to understand, usually the name of a function will even tell you what the function does compared to a group of un-named loops and statements. It also makes code easier to work on in the future and helps by often abiding to the Single Responsibility Principle
